

East Palatka Holly

Ilex x attenuata

- A **hybrid** between two native species, the **Dahoon Holly** and **American Holly**, this tree was first discovered in the **Palatka** area and has become a popular cultivated **landscaping tree** throughout the Southeastern United States.
- While **not** having the **easily recognizable**, pointed leaves like those of the American Holly, the East Palatka Holly still produces **vibrant red berries**, which are a popular food source among many different **bird** species.
