

# Florida Maple

*Acer floridanum*

- Although not completely **endemic** to Florida, the Florida Maple is a staple of **deciduous hardwoods** in Florida and the southern United States. Most of the population is found in Florida's **panhandle**, as well as in more isolated groups throughout **Central Florida**.
- Considered by some to be a subspecies of the **Sugar Maple** (*acer saccharum*), the Florida Maple is also sometimes referred to as the **Southern Sugar Maple**.
- The Florida maple is **tolerant** of many different **environments**, and can be found growing in parks, yards, cities, swamps and forests.
