

# Lemon Tree

*Citrus limon*

- *The lemon plant forms an **evergreen** spreading bush or small tree and produces characteristic **sour fruits** (Lemons).*
- *Its young leaves are **oval** and have a **reddish tint** and later turn **green**. The flowers, which can bloom all year but generally do so in the **fall** and **early spring**, have a sweet odor, and from them the fruits grow.*
- *Lemon trees often have sharp **thorns** along their branches, which make **harvesting** lemons somewhat difficult.*
