

# Sabal Palm

## *Sabal palmetto*

- *Sabal palms have curved, costapalmate, fan-shaped leaves with blades 3–4 feet long and petioles 3–6 feet long.*
- *When free of nutrient deficiencies, Sabal Palm has a full, round canopy atop a fibrous trunk.*
- *Branched inflorescences produced during the late spring months extend beyond the leaves and contain thousands of tiny, creamy-white flowers that attract bees.*
- *Small Black fruits are also produced in late summer and consumed by raccoons and other animals.*
